Week 7 Classroom Content

Sliders in Html

1. A slider is a set of frames in a sequence that can be traversed respectively.
2. It return value in the range of 0 to 100.

Ex-

```
<input type="range" min="1" max="100" value="50" class="slider" id="myRange">
```

Input type="range" will make the input tag a slider. Min and max attributes are used to provide the range of slider value.

Problem Statement

1. Create a music player application using javascript,html and css.
2. The application should play songs out of the given song list.
3. User can also be able to seek a song to any point in the song
4. User should also be able to change the volume of the song
5. User should also be able to select next and prev song in the given song list
